

Applitec PRO-Line

A New generation of insert tooling for Sliding Head machines. Applitec Swiss Tooling based in Moutier, Switzerland have pioneered the twin screw insert program for sliding head machines for many years, and continue to look to new ways of enhancing the performance and cost effectiveness of their tools. The TOP-Line programme still remains the best selling line from Applitec with its diversity, performance and quality. That said, many customers still look to the insert cost. The ECO-Line single screw Insert solution has met those cost down needs but many users prefer a twin screw clamping solution for the rigidity. The PRO-line is set to offer the best of both lines.. PROductivity and PROfitability.
