

EXPANDING ARBOR SYSTEM

This unique system has been designed as a modular solution for all machines fitted with a standard dead length collet system.

The system consists of two parts:

1. The interchangeable expanding arbor to suit each application.
2. The collet sleeve adaptor (replaces existing collet sleeves)

The system can be adapted to a range of collet sizes from micro applications for medical and horological work with F8 collet clamping minimum bore \varnothing 0.80mm through to larger bores on F66 (DIN185E) collets.

** Prices upon application.*
