

PRISMATIC CLAMPING SOLUTIONS FOR SUB-SPINDLE APPLICATIONS

Modern CNC Sliding Head and fixed head lathes have become significantly more than just turning lathes. With multi axis capabilities, it is possible to achieve a wide variety of machining applications.

In addition to the new MASTER-Clamp systems, ECS-Swisscollet have also patented a new prismatic clamping system that can be adapted to fit most CNC Lathes using a dead length (F-Type) collet systems. This allows complex parts to be clamped where standard collets would not be suitable.

For more information, or to discuss a particular application, then please call or email our technical team.
